Defect No.	Defect	Output Before Seeding	Output After Seeding	Suggested Correction	Severity
1	GetVenues function only returns first 10 venues	GetVenues function returns as many venues as there are	GetVenues function returns first 10 venues	Remove the splice code at the end of the getVenues function that removes everything past 10	1
2	GetVenues function only returns food & entertainment instead of letting the user choose categories	GetVenues function returns venues based on what the user selects	GetVenues function only returns food & entertainment venues	Remove the code that sets the array to only to food and entertainment	1
3	PlaceDetails function returns 0 for rating	PlaceDetails function returns rating from Google Maps API	PlaceDetails function returns 0 for every rating	Change PlaceDetails rating from the static code "0" to "placeDetail.json.result.rating"	2
4	PlaceDetails function returns "www.example.com" for website	PlaceDetails function returns website from Google Maps API	PlaceDetails function returns "www.example.com" for every website	Change PlaceDetails rating from the static code "www.example.com" to "placeDetail.json.result.website"	2
5	Dateplan name could be null	The modal will not close if nothing is typed	Modal closes and saves an empty name	Check if the input is empty or not	2
6	The name of the activity does not show when view plan is clicked	Name of activities are displayed in an unordered list	Empty bullet points are displayed	Change results[resultIndex].placeid to results[resultIndex].name	1
7	Create plan modal toggles off when user starts typing a name	Modal should remain until user cancels or creates the name	Modal closes when a character is typed	Remove modal toggle on the event when name is typed in.	2

8	Sorting by rating	The sorting function should sort the plans by rating	Sorting dates by rating does not sort by rating	Check to see if the called sorting function sorts by rating correctly	1
9	Sorting by price	The sorting function should sort the plans by price	Sorting dates by price does not sort by price	Check to see if the called sorting function sorts by price correctly	1
10	Rating a plan	Rating a plan saves the rating to that plan	Rating a plan does not save the rating to that plan	Ensure that the rating API call is properly being called when a rating is selected	1
11	Deleting a plan	Deleting a plan should result in the deletion of a plan for the user	Deleting a plan does not result in the deletion of a date plan for the user	Check to see if the request to delete a plan is properly being called	1
12	Populating crowdsourced venues	Crowdsourced events are pulled from a 10km radius (to match google API results)	Crowdsourced events are pulled from a 20km radius	Change the crowdsourced API call from 12.428mi to 6.214mi	1
13	Creating new crowdsourced venues	Crowdsourced venues are inserted into the database	Crowdsourced venues will occasionally not be inserted into the database	Correct the createVenue API call in src/venues/post.js	2
14	Searching based on price range	Price range of returned venues is based on $-$$$$	Regardless of search parameters, $$$$ is always used in the search	Correct the getPlaceDetails call to use value provided in post request	2
15	Input negative number on min time in form	Changed user input to a 0 if a negative number was	Allows the user to input a negative number	Add a check that checks if the number is negative, and if it is, replace it with a 0	2

		inputted			
16	Can't unselect a date type from the form	Allowed the user to click on an already selected date type to remove from their selections	Does nothing when you click on an already selected date type to search for	Add a check to see if the user is clicking on an already selected date type, and remove it from the selected state	2
17	Visit their website is broken sometimes on the list page	The list cards either showed "visit their website" or "no website"	Card always shows "visit their website" but when there isn't a website the link is broken	Add a check to see if the website is undefined, and display "no website"	1
18	Map zoom	The map starts a reasonable zoom level	The map starts all the way zoomed out	Change the zoom level when initializing the map	1
19	Plans rating	The user could rate their plans from 1-5	The user can rate 1, 2, 4, or 5 but not 3	Add an option to rate the plan a 3	1
20	Apostrophe in venue	If a user saves a plan with a venue containing an apostrophe, it will be delimited and saved	The activity is not saved into the database	Delimit all apostrophes before inserting into db	2
21	Delete all plans	If a user deletes a plan it only deletes that one plan	If a user deletes a plan it deletes all of their plans	Modify sql query to only delete a single plan	1
22	Save plan activity limit	DB will save as many activities as the user specifies	DB will only save 2 activities that the user specifies	Change server logic to save all user activities	1
23	Save plan rating	Rate plan saves the plan	Rate plan saves the plan	Change logic on server side to correctly save	1

		with the user specified rating	with a rating of 10	the rating between 1-5	
24	Rate plan a 5	Rate plan allows a user to save a rating between 1-5	Rate plan will not allow a user to rate a plan as 5	Change logic on server side to include boundary case of 5	2
25	View plans limit	View plans returns all of the plans a user has	View plans only returns 5 user plans	Change logic on server side to return all user plans	1
